About me

Information Systems undergraduate at the Federal University of Bahia (UFBA) with hands-on experience building RESTful APIs in Node.js/NestJS with Prisma and PostgreSQL. Background in Java and Python, with applied experience in algorithm design and static analysis through academic research. Comfortable working with Git/GitHub, debugging server-side logic, and collaborating with cross-functional teams. Quick learner, eager to grow as part of a global engineering team.

 github.com/viRafael

Skills

- NestJS, TypeScript, Java, JavaScript
- HTML and CSS
- PostgreSQL, Docker, and Prisma
- Git and GitHub
- Linux
- Agile Methodologies

Education

- B.Sc. in Information Systems (in progress)
Federal University of Bahia (UFBA) 2024 – present

Projects

- **Services Booking API**
 - Built a REST API for service scheduling with JWT authentication, Stripe payments (including webhooks), and Google Calendar sync.
 - Implemented real-time notifications with Socket.io and background job processing with Redis and Bull queues.
 - Build with: Node.js, NestJS, PostgreSQL, Prisma, Docker
 - GitHub: github.com/viRafael/API-Servicos
- **Job-Matching Platform API**
 - Designing and building a NestJS backend for a job-matching platform, including admin endpoints with filtering, search, and pagination against a relational schema.
 - Implemented a recommendation engine using TF-IDF and cosine similarity to match candidates and job postings, plus a custom validator implementing a two-digit checksum algorithm.
 - Built a swappable file-storage abstraction (S3, local, no-op) behind a single interface for profile picture uploads.
 - GitHub: github.com/viRafael/API-coworking
- **AriesLinter**
 - Detects 17 of the most common test smells in the literature
 - Provides real-time feedback during coding
 - Reduces late-stage refactoring costs
 - Developed within an academic research context
 - Paper published and presented at SBES 2025
 - GitHub: github.com/viRafael/arieslinter

Experience

- **Scientific Researcher**
Aries Lab | CNPq PIBIC set/2024 - present
 - Conduct applied research in software engineering, focused on identifying and categorizing test smells in Java test suites.
 - Designed and built a static analysis tool (algorithm-driven pattern detection across 10 common test smells) with real-time feedback during code authoring, reducing the cost of late-stage refactoring.
 - Co-authored a research paper published and presented at SBES 2025 (Brazilian Symposium on Software Engineering).
 - Collaborate with master's and Ph.D. researchers on paper writing and review.
- **Commercial Director**
TITAN | (Junior Enterprise, UFBA) nov/2025 - present
 - Define and execute commercial strategy while supporting technical scoping of software projects for clients.
 - Provide hands-on support in coding and technical review of projects delivered by the development team.
 - Lead and coordinate a team, tracking KPIs and organizational growth metrics.
